Plant Hazard Analysis & Risk Assessment

Monitor ABN: 76 159 267 679 143 Gunnedah Rd Tamworth NSW 2340 Ph: 02 6755 6000 E: service@monitor.net.au

Date: 10/09/2024

This Hazard Identification and Risk Assessment document is Model specific. It is based on the knowledge that all new machines of this model were/are produced to the same specification and design. It assumes all examples of this exact model currently in service to be as per the original specification, and to have been and continue to be operated and maintained in accordance with the Manufacturers requirements, and with all applicable statutory and regulatory requirements of an original example of the Model for which it was prepared. This Assessment must

- Having regard to the general arrangement of miscellaneous equipment or facilities that may be provided on the plant according to the end users requirements or specification
- According to the particular circumstances under which the plant is used and maintained
- As existing risk control measures are revised or new risk control measures are introduced and
- Having regard to any unauthorised alterations or modifications made to the design or operation of the

Monitor have made every attempt to identify all reasonably foreseeable operating circumstances in preparing this Assessment, however no guarantee as to the completeness of this Assessment is provided or implied. It is the responsibility of Owners, Employers and Operators to identify all hazards associated with the use of this equipment specifically applicable to the task to be carried out and to where the equipment is to be used or located. They must assess the risk potential for each of the identified hazards and ensure that all reasonably practicable steps are taken to ensure those risks are effectively controlled.

- All operators must be trained and competent in the safe use of this particular piece of equipment, and hold appropriate qualifications as required by applicable regulatory requirements
- Operators of the equipment to which this Plant Risk Assessment refers must read and understand the Instructions for Use and Warnings contained within the Operators Manual prior to use
- All Daily Pre-Start Checks, Routine and Periodic Inspections, Maintenance and Repairs to this equipment must be carried out in accordance with the requirements of AS2550.10-2006

THIS DOCUMENT IS CONTROLLED - UNCONTROLLED WHEN PRINTED

ID	Description of Hazard Potential		Activity	Risk control measures already	Risk	Supplementary risk control	Risk
	Origin	Consequence	-	implemented		measures	score
1	Operator Competency	l.					
1.1	Untrained operator, not following proper operating procedures. Distracted operator. Following a poor system of work. Operator working alone.	Entanglement (amputation/death) Laceration / cuts / bruises / fractures Serious injury or death	Set up Operation Maintenance	Operation instructions explained in operator's manual	C4 Extreme	Train operators on safe use of the plant. Operator training should include at least the following: • pre-operation inspections • safe operation of plant • regular maintenance tasks • understanding of plant operation • capabilities and limitations • emergency procedures Do not operate the plant unless proper training has been received. Ensure operator's manual is kept with the plant for reference. Do not operate the plant when distracted, ill, excessively fatigued, or under the influence of drugs or alcohol. Implement appropriate system of work based on manufacturer's recommendations (e.g. operating instructions shown in operator's manual).	B1 Low
1.2	Misuse Unauthorised use of plant	Entanglement (amputation/death) Laceration / cuts / bruises / fractures Serious injury or death	Operation	Operator's manual warns about not using the plant for other than its intended purpose.	C4 Extreme	Do not use the plant for any other purpose than its intended use as explained in the operator's manual. Do not operate the plant unless proper training has been received.	C4 Extreme

ID	Description of Hazard Potential		Activity			Supplementary risk control	Risk
-	Origin	Consequence		implemented		measures	score
						Keys are not to remain in an unattended machine.	
2	Plant Limitations						
2.1	Slope operation	Roll over	Driving Operation	 Operator's manual recommends that you operate the machine once you consider the following criteria: configuration machine maintenance operating speed of the machine conditions of the terrain fluid levels, and tyre inflation pressures. 	C3 High	Avoid any conditions that can lead to tipping the machine. Avoid driving on ground too soft to support the machine's weight. Avoid operating the machine across the slope. When possible, operate the machine up the slopes and down the slopes. If the machine has to be stopped on an incline, make sure that the machine is pointing either up or down the slope. Also chock both wheels at the downhill end.	B2 Low
3	Operation						
3.1	Damaged machine controls	Crushing Impact	Set up Operation	Swing out control can be positioned inline for better manoeuvrability in tight spaces.	C2 Medium	Regularly inspect machine controls.	A1 Rare
3.2	Moving chipper into position	Overturning Crushing	Driving Set up	Follow Operator's manual recommendations (as listed above). Machine can be fitted with dual wheels to provide increased stability and traction. Machine fitted with 2 speed self-propel drive.	C4 Extreme	Carry out job site risk assessment to determine suitability of the site before commencing any work. Avoid driving on steep ground; find alternative routes whenever possible. Be aware of performance features of the equipment in operation and the effects on machine stability. Do not stand on the lower side of the plant while driving on steep ground.	B2 Low

ID	Description of Hazard Potential		Activity			Supplementary risk control	Risk
	Origin	Consequence		implemented		measures	score
3.3	Set up	Struck by flying debris	Operation	Operator's manual states when in use, flying debris could be thrown past guards and injure bystanders if they are in these areas.	D3 High	Ensure only operators are within work area - ensure the exclusion zone is in place and operational. NEVER stand or allow anyone else to be directly in front of machine.	B2 Low
3.4	Prestart inspection	Laceration / cuts / bruises / fractures	Operation	Prestart inspection as per manufacturers recommendation. Grinder fitted with - Emergency stop button - Operator safety tether - Shatter resistant and heavy rubber debris curtains - Operator window		Ensure any fitted safety devices or equipment are in good condition and functional during Pre-start check.	A1 Low
3.5	Uncontrolled movement of plant components	Entanglement (amputation/death) Laceration / cuts / bruises / fractures Serious injury or death Muscular stress / Musculoskeletal Disorder	Set up Operation Maintenance Cleaning Troubleshoot	Prestart inspection as per manufacturers recommendation. The control levers will re-centre themselves in a neutral position when released. No movement should occur.	C3 High	Isolate power to machine and remove the main switch key when performing maintenance and cleaning tasks. Implement 'tag out' procedure to isolate faulty/out of order plants. Maintenance to be carried out by a competent person. Pay attention to hazard decals to machine.	B2 Low
3.6	Operator safety	Entanglement (amputation/death) Laceration / cuts / bruises / fractures Serious injury or death	Set up Operation Maintenance Cleaning Troubleshoot	Ensure operator: - Has no loose clothing or jewellery, hair tied back - Has snug fitting PPE with no cuffs or strings	D4 Extreme	May require dust mask dependant on type of timber being chipped. Machine fitted with a swing out controls.	B2 Low

	Origin	Consequence	1	implemented		measures	score
				 Has clothing tucked in where applicable. Is provided with correct rated hearing protection. Safety footwear 			
3.7	Grinder operation	Entanglement (amputation/death) Laceration / cuts / bruises / fractures Serious injury or death Muscular stress / Musculoskeletal Disorder	Operation	Operator's manual recommends only a portion of the cutting wheel with the 80° area shown in the following image should engage the stump. never undercut the stump or use the bottom of the cutting wheel for cutting purposes.	D4 Extreme	Ensure material to be chipped is clear of metal, stones, plastic, fauna, pests, diseases, rope or other contamination. Ensure that only an approximate 50 mm is ground at a time. Use smooth, comfortable speeds while operating. When it is desired to cut smaller roots, it may be more effective to do so before, rather than after, cutting the stump. Should the chip buildup become excessive when cutting, shut off the cutting wheel, wait for the cutting wheel to stop rotation, retract the machine from the stump and clear the chips to one side.	B3 Medium
				Machine is self-propelled, making it easier to traverse up and down hills, trailer ramps, mounded landscaping, etc. Option of remote control available.		On larger stumps, when cutting from one side, eventually a tyre may tend to roll into the hole. If the hole is deep enough, severe damage to the operator station may occur. This may be prevented by moving the machine to another side of the stump to continue

						removal, or by filling the hole with chips before continuing.	
3.8	Cutting wheel	Struck by flying debris Entanglement (amputation/death) Laceration / cuts / bruises / fractures - Serious injury or death Vibration Aggressive grabbing causing stump grinder to hop	Operation	Ensure the cutting wheel only has the recommended number of teeth installed. The use of oversize teeth will induce extreme impact energies into the machine's structure. Use of wrong teeth can set up vibrations that will harm machine's structure. Rotation does not stop instantly. Stand at the controls and watch the cutting wheel until it comes to a complete stop before doing anything else.	D4 Extreme	Clear away debris regularly. If chipper begins to vibrate or shake violently, stop work immediately and stop machine. Always stop machine, wait for moving parts to stop and lock out power before removing any cutting teeth. Ensure that the carbide tip can remove a clear "kerf" from the stump without the body of the tooth ever contacting the stump. This concept reduces drag, which maximizes the use of the machine's horsepower. This also reduces wear on the tooth body and on the attachment hardware.	B2 Low
3.9	Faulty/out of order, or poorly maintained plant	Entanglement (amputation/death) Laceration / cuts / bruises / fractures Serious injury or death Muscular stress / Musculoskeletal Disorder	Operation Emergency Maintenance	Operator's manual outlines plant maintenance schedule. Current maintenance inspections up to date as per manufacturers recommendation.	B4 High	Always perform pre-operation inspection before operating the plant. Implement 'tag out' procedure to isolate faulty/out of order plants. Do not use an 'out of order' plant. Record all faults in logbook. Perform plant maintenance as per manufacturer's maintenance schedule. Keep maintenance records / plant logbook up to date.	B1 Low
3.10	Refuelling	Explosion			B4	When refuelling:	A2

ID	Description of Hazard Potential		Activity Risk control measures already		Risk	Supplementary risk control	Risk
	Origin Consequence			implemented		measures	score
		Fire			High	 Keep away from ignition sources; Do not smoke; Avoid spilling fuel over hot engine. 	Low
3.11	Engine exhaust pipe	Burn	Operation	Exhaust pipe guarded by exhaust shield. "Hot surface" decal in place.	C2 Medium	Do not touch exhaust pipe when hot.	A1 Low
3.12	Plant modifications after completion of risk assessment.	Crushing Overturning	Operation Set up	C5 Extr		Ensure modifications made to the plant are inspected, assessed, and approved by a competent person. Review hazard analysis and risk assessment after plant modifications.	B1 Low
4	Transport / Handling						
4.1	Loading and unloading – driving on/off	Roll over Crushing	Transport	 Make sure that the entire width of the tyres will be on the ramps before driving on the ramps. Use low speed / low engine RPM on slopes / ramps. Always load the rg55 with the operator controls in the operating position or with remote control if equipped. The controls can easily be operated while walking alongside the trailer during loading. 	C4 Extreme	Follow appropriate loading procedures including using weight rated ramps, have ramps at a low inclination, all person clear from the loading zone and placing the heavy end towards the front of the tray or tow hitch on a trailer.	B2 Low
4.2	Failure of chains used for tying down / tie down straps	Roll over Crushing	Transport	Plant is fitted with designated tie down points.	C5 Extreme	Use tie-down points provided on the plant to secure it for transportation.	B2 Low
